THUNDERGADE

In 199X—Nuclear weapons have been totally banned and have disappeared from the earth. World peace seems to be on the horizon. However, a rumor has surfaced that nuclear weapons are secretly being made in a northern country. To counteract this, the United States organized a speical military unit and has sent them into the alleged enemy base.

With special military bikes that break through high-speed enemy defenses and with advanced military-trasnsport bombers supporting them, the specialists broke into the unknown territory to destroy the nuclear arsenal—This is the special military unit—U.A.G. (Un Attached Granadier)!

How To Play:

*Player-1 controls the blue bike and player-2 controls the yellow bike. Press the Left button to fire the machine gun and destroy the advancing enemy. Press the Right button to call for an air attack with the military-transport bombers.

*There are 4 rounds—city, desert, jungle and enemy base— and, the closer you get to the enemy base, the harder they attack.

*Power-up items (such as side-cars) appear on the screen in the beginning, but most power-up items appear when destroying obstacles (buildings, etc.)

*Some items have bomb-marks. If you can take one of these items, the number of support bombings is increased by 1.

*There are 4 special enemy characters—giant HOMLUNCS, submarines, land battle-ships, and super-large gun-ships—which have differecnt weak points. These large special characters can be destroyed by shooting each weak point.

*At the end of the enemy base, there is a nuclear fortress. Game ends when destroying this nuclear fortress.

*A second player can join the game at any time by inserting coin(s).

*When the player loses all his characters he can continue by inserting coin(s) before the timer reaches "0".
